How to increase FPS in the Kingdom Come: General delivery tips First, the most significant changes in the graphics occur when changing the configuration «M nima» to «Media.» A greater increase will not lead To important changes in general. Therefore, if your hardware is not high-end, the medium-high configuration should be your best option. The game should be started in full screen mode (without windows or without edges), do not forget to check it in the configuration. Ram Allocation seems that this game really has problems with RAM's assignment. If you have 16 GB or more, use the command Å -HeapSize 2 097 152Å e i in the launch options. If you have 8 GB, use Å «GREAT SIZE 1 048 576.» This will assign RAM to be used as a game cache. In addition, do not configure a cache that is greater than about 1/8 of your general RAM, it will probably reduce the FPS instead of increasing it. For another amount of RAM: 4 GB -HeapSize 524 288 12 GB -HeapSize 1 572 864 24 GB -HeapSize 3 145 728 32 GB -HeapSize 4 194 304

Deactivate V-Sync You must fix the micro-Stutter, freezers and drops of framework. 1. Go to the installation directory of your Steam Library (for example, C: \ Program Files (x86) \ Steam \ Steamapps \ Common \ KingdomDexeRerance) 2. Create a new USER.TXT document in this folder 3. Write R_VSync = 0 3A. You can also add a SYS_MAXFPS = 60 * 60 line. It is the maximum amount of FPS. You can choose 120 or 144 for higher speed monitors or any different value. This should help with the tear of the screen as we have deactivated V-Sync. Try different values to achieve an optimum image for your configuration. (*) 4. Save the changes, close the file. Rename user.txt to user.cfg (*) You can also try different maxfps rated values by typing the sys_maxfps ## (# is 60 or another FPS value) in the game console. You can open the console by pressing the "~ - Å" button on the keyboard. note, when you close the game, all the changes you have made will be lost. Do not forget to set maxFPS in the user.cfg file after finding the optimal value.
