If you are being asked to take a test using Respondus Lockdown Browser, with or without Monitor, you will need to download the program before you take your test. Allow at least 15 minutes to download and install the Respondus program, or plan to do it a day or two before you take the test. These instructions walk you through downloading Respondus Lockdown Browser for a Mac. If you have an iPad or a PC, you need to follow a different instructions. Download Respondus for Mac Downloading Respondus LDB: Go to the Respondus download website via this link, or using the link provided to you in your class. Do not use any other link to download Respondus as each link is specific to a particular university. In order to install software from the Internet, you must have "admin" control on your computer. If you would like, watch the short video that Respondus provides in the "Before You Install." This is an optional step. Click the button that reads "Install Now." Your computer will begin to download the package. You can see the progress of the download in the upper-right corner of your browser window by a small icon with a downward pointing arrow. Once the download is complete, click that arrow, and double click the file "InstallLDBPackage64c-2-0-6-01.zip. You can also find the package by going to your "Downloads" folder from your Finder. Double-clicking that zip file will unzip it but leave it in your Downloads area. Locate the unzipped package and double-click again. This action should bring up a new Install window on your computer. You will see a warning that "This package will run a program to determine if the software can be installed." Choose "Continue" here. You are now at the first of seven small steps associated with the download. Choose "Continue" for the Introduction step. Choose "Continue" for the License step, and then "Agree" for the License step, and then "Agree" for the box that pops up. Choose a destination for the installation. For most users, that will be choosing "Install for all users of this computer," so click on that and then choose "Continue." If "Continue" is not an option, make sure you have actually clicked on your selection, and not simply moused over it. The next window tells you how much space you will need on your computer for the program. If you need to change the installation location for the program, you may do that now. For most people, it's time to choose "Install." You may need to type your computer's password into a box that pops up at this stage. This is the password you use to unlock your computer. Type that in, and choose "Install Software." The installation will now get underway. This step typically takes only a few seconds. Once it's complete, choose "Close." You may now close out any open windows and your browser. To find the Respondus LockDown Browser, you will need to open your Finder, go to your "Applications" area, and choose "LockDown Browser.app." There are multiple ways to do this step, so choose your favorite. Double click the LockDown Browser app to launch it. Respondus LockDown Browser can only be used to go to Wichita State's Blackboard environment. You may notice when you attempt to launch LockDown browser that the system tells you to change certain system preferences before you can continue. You will need to go to System Preferences > Sharing > and "uncheck" Screen Sharing, Remote Login, Remote Management, and possibly other applications. You may also be asked to quit other applications on your system before it can launch. For the rest of the applications, the program will offer to close them for you, so go ahead and authorize that unless you have unsaved work you need to tend to before they are closed. You must close these applications before you will be allowed to launch LockDown browser. Taking a Test Using Respondus LDB (only) on Your Mac In order to take a test using Respondus LockDown Browser, you will need to close out the programs you have running on your computer and start up the browser. If you are unsure about that step, return to step 16 above in the downloading instructions. Each time you open Respondus LockDown Browser, you will be prompted to accept cookies. You will have to click "Agree & Continue" in order to access your test. Enter your WSUId and password into Blackboard to login. Go to "My Courses" and find your class. Open the class and find your test. Once you click the title of the test you will be taken to the "Instructions" screen where you can read about the limitations of your test. When you are ready, click "Begin" and take your test. While using Respondus LockDown Browser, you will not be able to use your computer to go to websites or communicate with the outside world. When you complete your test, choose "Save and Submit" and then "OK" on the popup window. Click "OK" again to view your score, if it has been released yet. You can also check your grade in "My Grades." When you are finished, exit Blackboard and Respondus LockDown Browser. You can use Respondus LockDown Browser to take one test at a time. If you have other tests, or if you would like to re-take the test you just submitted, you will be required to close Respondus LockDown Browser and start the process over at step 1. Taking a Test Using Respondus LDB with Monitor on Your Mac The addition of the "Monitor" step to the regular LockDown Browser experience adds a few more actions you need to take before you can login to your test. You should account for an additional 10 minutes to take care of these steps. In order to use Monitor, you must have a webcam attached to the computer you are using. Monitor is a feature of some tests, and it requires you to be in Respondus LockDown Browser to enter it. Begin by completing "Taking Test" steps 1-5 above. Once you click "Begin" you will be taken to a new window where you will need to click "Agree" to the Respondus Monitor Student Terms of Use, this is the first of nine steps to start Monitor. For Step 2: you will need to check your webcam's functionality. You need to be able to see your image here. If you can't, make sure your camera is not covered. If you still can't, you will need to exit Respondus LockDown Browser and check to ensure your webcam is properly selected. Click on the Apple icon in the upper left of your screen, choose "System Preferences," then choose "Security and Privacy," and make sure that "LockDown Browser" is chosen. Once you see your picture in the window, click "Yes." For Step 3: you will be asked to record a 5 second video. Click "Continue" and then "Accept" and read the additional instructions in the new popup box, and choose "Continue." Step 4 is simply guidelines and test taking tips. Read through them by clicking "Next." Step 5 asks you to take a picture. Face the camera and click "Take Picture" and then "Continue." Step 6 asks you to take a picture of an identification. Unless your professor asks for something else, your WSUId is fine for this step. Click "Take Picture" and then "Continue." Step 7 asks you to use your camera to record your surrounding environment. If you can move your camera, go ahead and video your workspace by clicking "Start Recording," and then after a few moments, a new button called "Stop Recording" will appear. Click it. The system will then play your video for you and you can choose "Continue." Step 8 is facial detection. Look at the camera and you should get a "Success!" notification. If not, try removing your glasses, hat, etc. and try again. Click "Continue." Step 9 allows you to begin your exam. Click "Begin Exam." You will be taken directly to your exam in Blackboard, and if there is a timer, it will begin. From here on out, the experience is identical to Respondus LockDown Browser. See "Taking Test" steps 6-8 above. This is a secure browser created to protect students while taking online assessments. It is designed to prevent cheating by blocking access to other programs and websites. This is a web application for help educators monitor student, their online activity on exams. It used to prevent cheating on LockDown Browser Linux online exams. LockDown Browser download can be used to block access to websites and applications that are not authorized for the exam. It also allows educators to track their activity, monitor progress on exam. Interface This is very easy to use. The interface is simple and straightforward. All of the buttons and functions are easy to find and use. LockDown Browser Mac has a simple, intuitive interface. The main screen displays the list of websites and applications. The student can click on any of the websites or applications to view the details. The educator can also view their activity, progress on the exam. Usability This is very user-friendly. The interface is easy to understand and the buttons are easy to find and use. LockDown Browser is very reliable, not freeze. This is easy to use. The student can simply click on the websites or applications that are blocked for the exam. The educator can track the student's activity and progress during the exam. Functionality This is a very functional program. It blocks access to other programs and websites, which prevents cheating. It is also very reliable and does not crash or freeze.
