Kms activation cmd

To display very basic license and activation information about the current system, run the following command. This command tells you the edition of Windows, part of the product key so you can identify it, and whether the system is activated.slmgr.vbs /dliTo display more detailed license information–including the activation ID, installation ID, and other details–run the following command:slmgr.vbs /dlvTo display the expiration date of the current license, run the following command. This is only useful for Windows system activated from an organization's KMS server, as retail licenses and multiple activation keys result in a perpetual license that won't expire. If you haven't provided a product key at all, it'll give you an error message.slmgr.vbs /xprYou can remove the product key from your current Windows system with Slmgr. After you run the below command and restart your computer, the Windows system won't have a product key and will be in an unactivated, unlicensed state.If you installed Windows from a retail license and would like to use that license on another computer, this allows you to remove the license. It could also be useful if you're giving that computer away to someone else. However, most Windows licenses are tied to the computer they came with–unless you purchased a boxed copy.To remove uninstall the current product key, run the following command and then restart your computer:slmgr.vbs /upkWindows also stores the product key in the registry, as it's sometimes necessary for the key to be in the registry when setting up the computer. If you've uninstalled the product key, you should run the below command to ensure it's removed from the registry as well. This will ensure people who use the computer in the future can't grab the product key.Running this command alone won't uninstall your product key. It'll remove it from the registry so programs can't access it from there, but your Windows system will remain licensed unless you run the above command to actually uninstall the product key. This option is really designed to prevent the key from being stolen by malware, if malware running on the current system gains access to the registry.slmgr.vbs /cpkyYou can use slmgr.vbs to enter a new product key. If the Windows system already has a product key, using the below command will silently replace the old product key with the one you provide.Run the following command to replace the product key, replacing #####-#####-#####-#####-##### with the product key. The command will check the product key you enter to ensure it's valid before using it. Microsoft advises you restart the computer after running this command.You can also change your product key from the Activation screen in the Settings app, but this command lets you do it from the command line.slmgr.vbs /ipk #####-#####-#####-#####-#####To force Windows to attempt an online activation, run the following command. If you're using a retail edition of Windows, this will force Windows to attempt online activation with Microsoft's servers. If the system is set up to use a KMS activation server, it will instead attempt activation with the KMS server on the local network. This command can be useful if Windows didn't activate due to a connection or server problem and you want to force it to retry.slmgr.vbs /atoSlmgr also allows you to perform an offline activation. To get an installation ID for offline activation, run the following command:slmgr.vbs /dtiYou'll now need to get a a confirmation ID you can use to activate the system over the phone. Call the Microsoft Product Activation Center, provide the installation ID you received above, and you'll be given an activation ID if everything checks out. This allows you to activate Windows systems without Internet connections.To enter the confirmation ID you've received for offline activation, run the following command. Replace "ACTIVATIONID" with the activation ID you've received.slmgr.vbs /atp ACTIVATIONIDOnce you're done, you can use the slmgr.vbs /dli or slmgr.vbs /dlv commands to confirm you're activated.This can generally be done from the Activation screen in the Settings app if your PC isn't activated–you don't have to use the command if you'd rather use the graphical interface. After the installation of a Microsoft software product, the software has to be activated. In the past, the software activation had to be done directly by Microsoft by entering a so called "Multiple Activation Key" (MAK). This activation can also be done by the GWDG's KMS server for every computer of the University of Göttingen within the GÖNET. So it is no longer necessary to enter a license key to activate a Microsoft software product. These Microsoft software products can be activated by our KMS server: Windows 10 Professional, Enterprise, Enterprise LTSC and Education Windows 8.1 Professional and Enterprise Windows 7 Professional and Enterprise Windows Server 2019 Windows Server 2016 Windows Server 2012 / 2012 R2 Windows Server 2008 /2008 R2 Microsoft Office 2019 for Windows Microsoft Office 2016 for Windows Microsoft Office 2013 (all versions) Microsoft Office 2010 (all versions) To make a KMS activation work you have to use an installation medium form Microsoft's Campus or Microsoft Select program. KMS is the default activation process for these installation media. If you do not have such an installation medium, you can download them as an iso image from the network share \\wfs-msiso.top.gwdg.de\iso$. You need a GWDG Account to log in. Detailed instruction without having to enter a license key, a KMS software product automatically looks for a local KMS server during the installation. The software activates itself for 180 days if a KMS server has been found. Every week the software contacts the KMS server to reset this timespan back to 180 days. When the KMS server can not be reached for 180 days you get a grace period of 30 days. Within this 30 days you get a warning message and you have to reconnect to our KMS server (e.g. by VPN if you are outside the GÖNET). Otherwise the software reduces its features to a minimum until you reconnect to our KMS server. The KMS server is found automatically in many cases. Then nothing more needs to be done, especially if a computer is part of an Active Directory Domain. If this does not work, you still can activate your software manually with our KMS server (see below). After the installation you should complete the steps described below within 30 days if automatic activation does not work. If you already have entered a MAK key please follow the instructions in the chapter "Changing MAK to KMS activation". Manually: Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Enter slmgr /skms ug-kms.uni-goettingen.de This tells your computer the name of our KMS server. To complete the activation process enter slmgr /ato Manually: Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Change to the directory where Microsoft Office is installed. If you are running a 32bit Office on a 32bit Windows or an 64bit Office on a 64bit Windows enter cd \Program Files\Microsoft Office\Office14 if you are running a 32bit Office on a 64bit Windows enter cd \Program Files (x86)\Microsoft Office\Office14. Enter cscript ospp.vbs /sethst:ug-kms.uni-goettingen.de to connect to our KMS server Finally enter cscript ospp.vbs /act to complete the activation process. Manually: Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Change to the directory where Microsoft Office is installed. If you are running a 32bit Office on a 32bit Windows or an 64bit Office on a 64bit Windows, enter cd \Program Files\Microsoft Office\Office15 if you are running a 32bit Office on a 64bit Windows, enter cd \Program Files (x86)\Microsoft Office\Office15 Enter cscript ospp.vbs /sethst:ug-kms.uni-goettingen.de to connect to our KMS server Finally enter cscript ospp.vbs /act to complete the activation process. Manually: Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Change to the directory where Microsoft Office is installed. If you are running a 32bit Office on a 32bit Windows or an 64bit Office on a 64bit Windows, enter cd \Program Files\Microsoft Office\Office16 if you are running a 32bit Office on a 64bit Windows, enter cd \Program Files (x86)\Microsoft Office\Office16 Enter cscript ospp.vbs /sethst:ug-kms.uni-goettingen.de to connect to our KMS server Finally enter cscript ospp.vbs /act to complete the activation process. If you have already entered a MAK key and want to change to KMS activation, you have to replace the MAK key by a KMS key. This is the default key for every Microsoft software product that has been purchased via a Microsoft volume licensing contract (e.g. MS Campus or MS select). To find the correct key for your Microsoft operating system, check the list at KMS Client Setup Keys. Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Enter this command: slmgr /ipk For Windows 8.1 installations e.g. enter slmgr /ipk GCRJD-8NW9H-F2CDX-CCM8D-9D6T9 Now you can activate you Windows installation using our KMs server. If this does not work automatically, please see Manual KMS activation Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Change to the directory where Microsoft Office is installed. If you are running a 32bit Office on a 32bit windows or an 64bit office on a 64bit Windows, enter: cd \Program Files\Microsoft Office\Office14 If you are running a 32bit Office on a 64bit Windows, enter cd \Program Files (x86)\Microsoft Office\Office14 Enter cscript ospp.vbs /inpkey: to complete the activation process, e. g. for Office Professional Plus 2010 you have to enter: cscript ospp.vbs /inpkey:VYBBJ-TRJPB-QFQRF-QFT4D-H3GVB Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Change to the directory where Microsoft Office is installed. If you are running a 32bit Office on a 32bit windows or an 64bit office on a 64bit Windows, enter: cd \Program Files\Microsoft Office\Office15 If you are running a 32bit Office on a 64bit Windows, enter: cd \Program Files (x86)\Microsoft Office\Office15 Enter cscript ospp.vbs /inpkey: e. g.: cscript ospp.vbs /inpkey:YC7DK-G2NP3-2QQC3-J6H88-GVGX for Office 2013 Professional Plus. Log into your computer with an administrator account. Type into the search field cmd.exe Click with the right mouse button on cmd.exe and select "Run as Administrator" Change to the directory where Microsoft Office is installed. If you are running a 32bit Office on a 32bit windows or an 64bit office on a 64bit Windows, enter: cd \Program Files\Microsoft Office\Office16 If you are running a 32bit Office on a 64bit Windows, enter: cd \Program Files (x86)\Microsoft Office\Office16 Enter cscript ospp.vbs /inpkey: e. g.: cscript ospp.vbs /inpkey:XQNVK-8JYDB-WJ9W3-YJ8YR-WFG99 for Office 2016 Professional Plus. Afterwards Office can be activated with our KMS server. See Manual KMS activation if this does not work automatically. For manual activation, you must run the Command-Line Interface (cmd.exe) as administrator. The option Run as administrator is available e.g. on right mouse click. Error 0xC004F074 ("The Key Management Service (KMS) is unavailable"): In most cases it refers to incorrectly set time or the time zone. Error 0xC004F035 and 0xC004F059: Especially for computers that were originally acquired with an OEM operating system, in this case the KMS activation is prevented by computer's BIOS. Such BIOS version contains an invalid ACPI_SLIC table. The KMS activation expect here a so-called "Windows marker" and fails if it is corrupted or not found. This error can usually be resolved by a BIOS update. When the 30 day grace-period has expired, Windows is running in "Reduced Functionality Mode", only the Internet Explorer can be called. In this case, to perform the KMS activation, enter the path into Internet Explorer: C:\Windows\System32\cmd.exe A command-line interface prompt without administrative rights. To run cmd.exe as administrator, enter the following command: runas /user:administrator cmd.exe A command prompt with administrative rights, you can continue with manual KMS activation. kms office 2016 activation cmd. kms windows activation cmd. office kms activation command. kms server activation cmd. kms activation command. kms activation command line. kms activation command office 2019. kms activation command office 2016
