He bought the Logitech K380 to use it as a full-time keyboard on a desktop with my 2018 MacBook Pro laptop (MBP), which, unfortunately, has a dique with infamous for malfunction. For Macos, Logitech provides a one tool called "Logi Options" for configuring the keyboard. I recently had my laptop's keyboard replaced due to worsening issues, and decided to start using an external keyboard to minimize wear and tear on the new one. This review focuses on what I personally need in a keyboard as a software engineer who types rapidly (~130 WPM) with a keyboard-shortcut-intensive usage style. When I type this word on the Logitech K380, it nearly always comes out "furiou", with the S missing. Why? There is no one-size-fits-everyone keyboard. It's not that the keyboard cannot handle three keys at once: the word "out" for example comes out just fine. For the special functions (pause/unpause, next track, volume up, volume down, etc.), although I use them all the time, I never need to press them in combination with the other modifier keys like shift or ctrl, so holding fn for them is OK. Relatedly: another Amazon review mentions key presses happening repeatedly and sporadically, making correct typing nigh-impossible. (For the GitHub-inclined, there is an issue in the Karabiner Elements issue tracker about it: pqrs-org/Karabiner-Elements#999.) This problem also means that you cannot switch the location of the ctrl and fn keys, which are reversed from their layout on Apple keyboards. Hey, Apple makes one of those! It's called the Apple Magic Keyboard (Wireless, Rechargeable). But I think it is exactly the right weight (1.17 lbs): it stays put while you type. Each key typed has two parts: the press and the release. Each switch only takes about 1 second, and it "just works," unlike Synergy, which requires networking your machines together and running special server software, or a USB KVM switch, which requires several cables and adapters. Sturdy and portable. But the word "plastic" eats the S. Rebooting in between configuration changes. And you still cannot map any other modifier key to fn either. In conclusion, I heartily recommend this for informal use of moderate slow speed typists. This keyboard already has many critics, and although I did not all, I did not see existing reviews focused on the specific problems I have with this keyboard. Keys like standard function keys "that sounds great in theory. When changing the devices, the keyboard forgets "that this option was enabled, and the ke keys are not FF-again, and the next time Pressing F3 to dig into some codes or by commuting terminal tabs or whatever, boom, your keyboard does not strip again. But "Please" eat the s, and "purse" eat the E. I tried. This is highly subjective. I tried it installed. Try vice versa. The keys have a good amount of trips: more than a 2018 MBP, less than a classic keyboard of 101 keys, for example, from a PC of Dell. I could not find any way to capture a FN key, nor to change the locations of the Ctrl and Fn keys to match an apple keyboard. So, why do not I buy that? An option that has is "Use all F1, F2, etc. (When the Karabiner items are installed, the keyboard modifier keys The dialog in system preferences wins a "function (FN)" key for the K380, but unfortunately does not work. But there makes it impossible to keep the Reliable muscle memory on the keyboard. Second, I had bad experiences with Apple's wireless keyboards since a few years ago: Several keyboards that refused to match, or played spontaneously after a Rato. They have been a Logitech fan for many years, having enjoyed using many of their keyboards and mice on the desktop PCs. When I saw that Logitech K380 had an almost identical form factor to the Magical Keyboard, including The FN key, had strong critics, was only \$ 30 on Amazon, and back the switch le le razilanosp atropmi sel on euq sal a y ,lamrofni s;Ám arenam anu ed odalcet nu nasu euq sanosreP .elbiuqesa)1 :olrecab euq ohcum eneit odalcet IE etse - sorp.otnetni nu elrad Adiced ,sovitisopsid ed s;Ávart a Otni Seuges HeSaHT.Gnitide TXET TSAF No repmad Gib a Stup SYEK RUOF ESOHT EPYT OTBA GNIEB TON + TLA TFEL FO TNELAVIQE EHT S'TI SEMIT REHTO DNA, NWOD / PU SSENTHGIRB S'ti Semitemos: Tnettsisnocni smees nwod / pu + nf .ge fo roivaheb eht,) Tceffe nekat dna deht esuaceb ro, derhiaper yltnecer Saw Draobyek Eht esuaceb REHTIE (SEK-F GNIEB TON ERA SEK-F NHRAEPON neve .pu + tla tfel sa gnith emas eht sdnes) evoba ees! semitemos (pu + nf gnissp;Á .ge os .sdraobyek ym ssorca ycnetsisyco erac dna, realp one lanoitidda tneverp, Rehtegot desserp nehw, syek fo snoitanibmc niatrec, ralucitrap ni .ylbailer Krow Ton Seod Erutaef Siht, ylanutrofnu.sdraobyek Rotcaf esuaceb, dne dna emoh, nwod eht lla syek worra + nf esu osla i.
