Skip to Main Content Go to Content Table Reference work Entrydoi: in the practical service for man and environment by identification and problem resolution can be defined as applied geochemistry . Water, food, fibers, construction materials, energy sources, natural resources for industry and ability to ensure proper and safe disposal of waste are all necessary for the Earth. The applied geochemistry concerns these needs and others. Much of the modern literature in geochemistry has developed since the early 1950s both in the western and eastern hemispheres. During 1956, Geochemistry and Cosmochemistry Acta began publishing, as Geokhimiya (Russian); In 1966, chemical geology received publication. In addition, the documents in which geochemistry was a fundamental or main part was (and are still) published in most geological journals. Geochemical documents have also become important in publications of international geological congresses, and in those of state and federal geological ...
