Procedure In the Eclipse Navigator view (or any Eclipse view that supports Team operations), navigate to the project that you want to remove. Right-click the project and click Team > Delete From Repository Workspace. How do I clean my Android project? Clear your project directory Obviously, try to clean your project from android studio : "Build > Clean Project". This will clear your build folders. Clear the cache of Android Studio using "File > Invalidate Caches / Restart" choose "Invalidate and restart option" and close Android Studio. Remove your .xml files. Are Android projects saved? Android Studio stores the projects by default in the home folder of the user under AndroidStudioProjects. The main directory contains configuration files for Android Studio and the Gradle build files. The application relevant files are contained in the app folder. While there is no undo git init command, you can undo its effects by removing the .git folder from a project. You should only do this if you are confident in erasing the history of your repository that you have on your local machine. Delete a Git repo From the web Select Repos, Files. From the repo drop-down, select Manage repositories. Select the name of the repository from the Repositories list, choose the ... menu, and then choose Delete repository. Confirm the deletion of the repository by typing the repo's name and selecting Delete. How do I delete a project in code blocks? Re: Beginner Trying To Delete A New Project Just delete all files belonging to the project (including the *.cbp-file) with your favourite file-explorer (they are normally placed in a folder named like your project, but that might be different, if you have changed some of the default settings in the wizard). How do you delete a CoCalc project? Once you get your ssh remote filesystem store is working, generate a new key somewhere private (your own computer, not CoCalc), enter it in the cloud storage & remote file systems dialog, then delete the file. Can I delete a project on OS? First, go to the project that you want to delete. Then click the Settings tab in the navigation bar. The project's "Settings" page will appear. Click the red Delete project button located near the top of the page. How do I permanently delete workspace? You can remove the workspace from the suggested workspaces by going into the General/Startup and Shutdown/Workspaces section of the preferences (via Preferences > General > Startup & Shutdown > Workspaces > [Remove]). Can I delete .Eclipse folder? Thanks. In general, Eclipse doesn't have a traditional install or uninstall process. It's basically just a folder of the application and then a workspace that you would have selected/created when you first run it. If you used the Eclipse installer, you may also have a bundle pool folder named . How do I delete an existing workspace in Eclipse? How to delete Workspace from Eclipse Launcher Selection Launch Eclipse. Click on Recent Workspaces. Eclipse will list all previously used workspaces. Right click on the workspace name that you want to remove. Click on Remove from Launcher Selection item. This will remove the workspace from the drop-down list. I had to remove my project from eclipse entirely. To do so I copied the folder of my project in workspace and pasted it onto this cloud Android Studio folder. Then I navigated back into eclipse and clicked selected deleted and then check the box to delete the project from my workspace. After that I closed eclipse. Opened Android studio and tried to open my imported project. At this point it told me my project didn't exist and prompted me to remove it from the list. After that this from my experience there are a lot of problems with build paths when I import a build.gradle file from eclipse to Android Studio. Android Studio is great but remember it is still in the I/O pre-release!!! Just my 2 cents! This article discusses deleting a project in Google's recommended Android Studio Integrated Development Environment (IDE) used to develop Android Applications (App). When a project is created or opened in Studio it is added to the Recent Projects list. Deleting a Project from that list does not delete it from the system. This article briefly covers the project deletion, and if necessary project recovery. Android Studio Recent Projects List Studio's recent project list is displayed on the Welcome screen. (Close the last project to return to the Welcome screen). It can also be accessed via the File menu and Open Recent option. There is a Manage Projects option under the recent projects list in Open Recent. This displays the list of projects known to Studio (and any defined Project Groups). How to Delete a Project in Android Studio In Android Studio to remove a project (or Project Group) from the Recent Projects list click the X. The X is in the righthand corner for the entry when the mouse pointer highlights that entry. (Alternatively use the context menu, normally right-click, and select Remove Selected from Welcome Screen). This does not delete the project from the file system. When a project is deleted from the recent's list in Studio it will remain on the system. To delete the project entirely use the system's file manager and delete the project's folder from the system. A project opened in Studio reflects what is on the file system. If the project is modified outside of Studio those changes are reflected by Studio. If an Android project is moved to a new folder or deleted then it will also disappear from the visible recent's list (the entry remains in the underlying settings file). Project Management in Android Studio In Android Studio project management is done via the file system. When a project is opened in Studio only the contents required for that project are visible. If another project is opened the choice is made to close the existing project and open the newly selected one, or open the newly selected project in a new Studio window. Closing the last Android Studio project (via the File menu and Close Project) returns to the Welcome to Android Studio dialog. There are no visible options for Studio projects listed on the Welcome screen. Simple clicking a project opens it. To manage the entries on the list the options are: Delete the entries use the X. Use the context menu on the recent's list to create and edit Project Groups. Delete or move the project files using the operating system file management program (e.g. File Explorer on Windows). If you understand XML files edit the contents of the configuration file recentProjects.xml. This stores the recent's list and any defined Project Groups. The recentProjects.xml file is located under the .AndroidStudio2.0 directory for the logged on user. An example path in Windows is C:\Users\John.Doe\AndroidStudio2.0\config\options\recentProjects.xml. Recover a Deleted Project in Android Studio If the project has not been deleted from the file system select the project using the import option on the Welcome screen. If the files have been physically deleted from the disk and no backup is available then a disk recovery tool is required (for example EaseUS Data Recovery Wizard). First undelete, i.e. recover the files, so that the operating system can see them again. The project can then be imported back into Studio. See Also For information on the folder and file structure of an Android project see the Tek Eye article Android Project Structure. Author: Daniel S. Fowler Published: 2014-02-08 Updated: 2016-05-21 Answer To remove a project using Android Studio, you must first open the project that you want to delete and then click the "Delete" option from the project's main menu (the one with the three lines in it). After that, from the main menu, pick "Projects," and after that, select the project that you wish to remove. In the end, choose the "Delete Project" option. FAQ In Android Studio, what are the steps to permanently deleting a project? In Android Studio, you may remove a project by choosing the project in the Project Explorer and then hitting the Delete button located on the toolbar. How can you remove a project? Open the project you want to remove in your account, then click the "Delete" button, which is located in the top right corner of the screen. What steps do I need to take to clean my Android project?
