Arrive soon - Our new freestanding refrigerator freezer of the French steel door. The smart choice for intelligent life.. - SWIPE - Discover which integrated chillers we recommend - head directly to our reviews of the best refrigerators. Should I choose an integrated refrigerator? If you are buying a new kitchen, here are the pros and cons to help you decide whether a built-in refrigerator is the right type for you. Pro of integrated refrigerators: They are built in your kitchen and hidden from the view. They are thinner than some refrigerators, and they will not protrude in your kitchen. Integrated fridge points: There are fewer models to choose from than freestanding refrigerators. Integrated refrigerators are much more expensive to buy. They also use more energy, so management costs are higher. Integrated fridge pockets This type of integrated refrigerator is built in high kitchen cabinets - either as single columns or in a unit bank. Some of the shorter models are called over-counter or in-column refrigerators. Cold can offer a large amount of storage space, which makes them a good option if your family eats a lot of fresh food and you need a lot of cool space. Integrated refrigerator sizes Most high integrated refrigerators are a fairly standard width and depth to meet the size of a standard kitchen cabinet unit of 60 cm. They may vary a couple of centimeters, but you won't have to make any extra space for ventilation. The larger are typically 177 cm tall. The next size down is about 140 cm and the smaller come to 123cm or less. Integrated high refrigerator prices This will depend on the brand you want. The highest models range from around £400 for a Beko and arrive at £700-£800 for an entry-level Bosch or Neff. You will pay up to £1,000 for a Bosch, Neff or Siemens with more functionality, while Liebherr models and probably cost more than £1,000. The prices for integrated high refrigerators start from £400-800 and go up to £1,000 more, depending on the brand. The integrated refrigerators under-contactThe under-contact refrigerators are integrated into a kitchen unit that sits under a working surface of the kitchen. Sometimes they are called built-in refrigerators and are ideal if you don't have much space in your kitchen. I'm on the small side, though. You might find that an integrated under-counter refrigerator is not large enough to contain a large load of food, different bulk offers or enough food for a large family. In addition, the crispy salad drawer is right at the bottom and you can fight to access fruits and vegetables if you find it difficult to bend. Built-in refrigerator sizes While the exact size could vary a few centimetres, each under-counter refrigerator will be less than 60cm wide and 60cm deep to fit the size of a standard kitchen cabinet. They will be even less than 90 cm tall. Make sure you do not buy one which is any higher - like an over-counter or in-column model - as it does not fit under your work surface. Integrated prices for refrigerators under quota Prices can start at £200-300 for a basic model from brands like Beko, Candy and Fridgemaster. But most models cost more. Most AEG, Bosch, Neff and Siemens models are in the price range of £350-£450, while a top of the Liebherr range will make you more than £500. Make sure that the integrated under-contact refrigerator is either high or less than 90 cm, or does not fit under your kitchen work surface. Why are integrated refrigerators so expensive? Built-in models are considerably more expensive than freestanding refrigerators - sometimes a few hundred pounds. There are various theories about integrated refrigerators are so expensive. One possibility is that designing cooling technology to work within a limited space was expensive to develop. Another is that since integrated refrigerators are less popular than freestanding models, production costs are higher. Oft could be that once you have added a refrigerator integrated to your kitchen, you have no other choice that to replace as-per-like when you need a new refrigerator. So there is less incentive for manufacturers to keep prices low. Do you want to know the best integrated refrigerator to buy? Go directly to our refrigerator reviews. What kind of backrest does the refrigerator have integrated? All refrigerators need insulation to keep fresh. This insulation is flammable, so it is essential that it is sufficiently protected in case of fire. The support that protects this insulation is currently made of both plastic, metal or aluminum laminate, depending on the brand and model of refrigerator you buy. We continuously monitor and evaluate the reviews that replace our reviews to take into account changes in standards and areas of concern. Our tests revealed that plastic support can be highly flammable. Therefore, we do not recommend any refrigeration device with flammable plastic support. All refrigerators with this type of support have been made What? Do not buy, regardless of how else they performed in our refrigeration and freezing tests. Each of our refrigeration reviews will tell you what kind of support that model has. If you already have an appliance with an inflammable plastic bottom, it is worth knowing that the probability of a refrigerator fire is very low, and the material used in the support can allow an existing fire to spread - but it is not the cause of the fire itself.
