Es unterstützt alle Format und HD-Flash-Dateien. Flash Player ist ein Hilfsprogramm für Google Chrome-Nutzer. Flash Player ist nicht offiziell mit Adobe Flash Player oder anderen Adobe-Produkten verbunden. Flash logo® (das Flash-Logo) sind eingetragene Marken von Adobe Inc. The Chrome web browser is perhaps more suitable for running Adobe Flash because Chrome sandboxes the Flash player plugin, making it a little safer Google Chrome should automatically update the Adobe Flash plugin itself when the browser application is relaunched, sometimes Adobe Flash Player can become out of date anyway and ask the user to manually update the Flash plugin. This tutorial will go through how to manually update Adobe Flash Player within the Google Chrome browser. How do I know when to update the Adobe Flash Player plugin within Google Chrome? Typically just periodically stop and relaunch Google Chrome will update the Adobe Flash Player plugin on its own and without any user recognition. However, this does not always happen. Sometimes you can see a yellow banner at the top of the screen saying "Adobe Flash Player has been blocked because it is out of date." or "S1 has been blocked because it is out of date." to indicate the plugin must be updated. A similar message will appear in Safari if Flash is out of date too. But, we're focusing on Chrome here so let's figure out how to fix that stuck out of the plugin message given in all Chrome browsers. How to update Adobe Flash Player Plugin in Google Chrome This updates the Adobe Flash Player plugin in the Chrome web browser, this is demonstrated in Mac OS but it works the same in Windows too. In the Google Chrome URL bar, type the following address: Chrome://components and hit Return Locate "Adobe Flash Player" in the list of Chrome components Click on "Update Control" under "Adobe Flash Player" and you will see various status updates indicating the status of update of "Status - Updated Component" components - this means that the Flash plugin has been successfully updated to the latest version (result conversion number shown corresponding) "Status - No component update"plugin to load It is important to keep Flash Player updated if you are going to use the Flash plug-in or have installed, either in Chrome or in another web browser. Personally, I only use the Adobe Flash plugin within the Chrome sandbox environment, and do not install Flash (or any other plugin) in Safari. This allows a user to uninstall Flash from your Mac in general, but still maintain the Flash playback features within the Google Chrome web browser sandboxed environment. Basically, this means when I want or need to use Flash Player for any reason, I use Chrome for those Flash websites. Of course you can also turn off Flash in Chrome especially too, but if you use click to play and keep Flash up to date, and keep Chrome updated, you don't really need to turn off the plugin completely inside Chrome. Being around since 1996, Adobe Flash Player has played a crucial role in web evolution. For the longer time, before HTML5 became really popular, it was the only effective way to perform online multimedia content, including videos, games, applications, audio and more. Today, the era of Adobe Flash Player is about to end. While Flash Player 2020 is still supported, Adobe announced in 2017 that 2020 would be the last year of software support. As a result, all major browsers, from Safari to Firefox and Chrome, have replaced most of the Flash Player feature with compatible HTML5 features. What's more, Microsoft said it would completely remove Flash from its browsers at the end of 2020. So why the internet, which has benefited so much from everything Flash had to offer, suddenly turned against it? In one word, it had a lot to do with Adobe's security issues and closed ecosystem. Why is Adobe Flash Player leaving? Inletter of 2010, thoughts on flash, steve jobs outlined its reasons for apple ios devices do not support the flash standard, which probably greatly accelerated acceleratedFall. The jobs mentioned poor performance on mobile devices, frequent crashes, high battery consumption and availability of better open standards (i.e. HTML5) that are able to completely replace Flash. In fact, security vulnerabilities hit Adobe Flash Player throughout his life, and was widely reported to be the primary target for hackers trying to exploit those vulnerabilities, which companies producing browsers and operating systems could not solve because of the proprietary nature of Flash. That said, there are still some reasons why you might want to use Adobe Flash Player. For example, it might still be the only way some legacy media content on the web (eg video, games) is going to play on your Mac. So let's look at how to activate Adobe Flash Player in Chrome. How to enable Adobe Flash Player on Chrome If you need to use Flash Player today, your best bet is to go with Google Chrome. You might be surprised to hear that the Flash plugin is already installed in Chrome, however, it is switched off by default — you need to turn on Flash in Chrome Flash settings yourself. How to allow Flash on Chrome? Open Google Chrome and go to Settings (* + J)Run down for "Privacy and Security" Click Site Settings Flash By default, there is a toggle set at the off location saying "The Block sites to run Flash (recommended)." Turn on, so he says, "Call first." Now, whenever you visit a website that contains something for Flash Player Chrome will ask your permission to play instead of blocking it. But your settings will only work until you left Google Chrome. So don't forget to return and reset it later. In case you are having issues with the Chrome Flash Player, Google Chrome updateHelp: Open Chrome and click the menu button in the top right cornerClick Update Google Chrome if available. Otherwise, you are currently on the latest version. Alternatively, visit google.com/chrome google.com/chromeDownload the latest version of Chrome from there Remember that Google Chrome will stop support for the Chrome Flash plugin at the end of 2020, so if you absolutely need to use it, make sure you stop Google Chrome from updating automatically before rather than later (and use another browser for day to day work). How are you doing? It's a bit more technical: Launch the terminal from your Applications folder Utilities UtilitiesType defaults write com.google. Keystone. Control Agent Interval OPress EnterQuit Terminal and relaunch Google Chrome Note: This command will stop the general Google Software update script from work, so none of your Google apps (eg. Google Drive for Mac) will automatically receive updates. To cancel the change and let the Chrome browser update again: Launch terminal Type the default settings of com.google. Keystone. Control AgentInterval 10000 Press EnterQuit Terminal and restart Google Chrome How to block websites using Adobe Flash It is likely that all those who need to run Adobe Flash Player for Chrome right now has a specific usage case in mind, such as a retro online game or an old school website. Virtually no one needs to allow Flash in Chrome for all websites. So, how does specific websites stop from accessing Flash? Although boring, it is easy enough to do: Open Google Chrome and visit any websiteClick on the padlock icon on the left of the URL barSelect the Flash descent and choose Block. If you do not see the drop-down menu, choose "Settings Site" instead, then find Flash in the list and select Block from there. How to update Adobe Flash Player for Chrome Most of the time, when you enable Flash in Chrome, it is going to be updated. But, occasionally, you might see a Chrome enable errorTo solve this, try updating Adobe Flash Player Chrome first. Open Chrome Type Chromium//components in the URL bar and hit Enter Scroll down for Adobe Flash PlayerClick "Check for update" Alternatively, you can simplyyour Chrome Flash Player altogether- Visit got.adobe.com/flashplayer/latreversionPick your operating system from the Select PPAP drop-down menu as a Click version Download Flash PlayerFind and install Adobe Flash Player for Chrome in the Download folder Why scan your Mac for Adobe Flash malware? You should understand that each main browser is disabling the use of Adobe Flash for a reason — there are simply too many security flaws in the software. So, if you consciously search how to activate Flash in Chrome, you are exposing yourself to some potential risk. What you definitely need here is a powerful and reliable malware removal software, so that nothing is able to put your Mac or your files in danger. Where are you looking for her? CleanMyMac X is the world's leading optimization for Mac. Not only does it scan your Mac for any kind of known malware and keeps its updated databases, but it also helps keep your privacy online, speed up your general Mac, completely uninstall all intrusive applications, it deals with useless extensions, shredding outdated personal files, free space and much more. To see if any malware has infiltrated your Mac: Launch CleanMyMac XNavigate to the malware removal tab under ProtectionClick ScanHit Remove, if any malware has been found How to recover deleted files on Mac After learning how to enable Flash on Chrome, you should at least try to prepare for all eventualities. One of which is the ability to lose some of the malware files produced by Adobe Flash Chrome plugin. How do you recover those files? Disk Drill is a top-notch app to recover any files recently deleted from hard drive. It works for files not intentionally removed as well as for disk utility errors or data corruption, either on hard drive or any external deviceMac. In addition, it has a convenient backup feature (a good habit of having) so you can save files in a safe place frequently with the 100% recovery rate. To use the diskstart the appconnect the external drive or choose the internal driver from the list and click recoverwait for scanning to finish and select the files you want to get back then, if you need to use flash today, have a chrome flash player plugin is probably your best bet. Just make sure to stop the update of google chrome to continue using past 2020 flash and install a malware removal app like cleanmymac x and data recovery software like disk drill in advance, in case. the best of all, cleanmymac x and disk drill are at your disposal absolutely free for seven days via setapp, a platform with more than 200 mac applications for any situation, from bill payments (chronicle) to file extraction (archiver) to keep contacts in a place (busycontacts). Try them all today at no cost and see for yourself! alone!
