By Terrance Karter i laptop image by Ewe Degiampietro from Fotolia.com There are two different types of MB that you might need to increase on your computer in order to make downloads faster. The first is megabytes, which are transferred per second as your Internet connection. The second is also megabytes, but refers to the amount of running memory you have on your computer. A lack of both types of MB can result in slower-than-normal download times. You can increase them both quickly and easily. Call your Internet company and ask how many MBps your connection runs at. After you have this figure, ask if what you have is the current fastest connection possible from the company. Upgrade to a connection that boasts a higher number of megabytes per second transfer rate. The Internet company that provides you with your Internet is the only one who can get you a faster transfer rate. Open your computer's "Properties," located under "Control Panel" or under "My Computer." See how much RAM is available. It should be listed in megabytes. If you can see from the provided pie chart that you are low on MBs of storage or MBs of running memory, your downloads might be compromised. Go to a computer store or a store that sells memory for your computer. Ask to purchase megabytes of storage or running memory, depending on what you are low on. Have the computer store install these into your computer, if you have never done so before. The company has unveiled a slimmed-down version of its Uber app for users in India and other emerging markets. The app is less than 5 MB in size, which means it's very easy to download for people who have slower mobile connections or not a lot of data. The app has also been designed to have a 300-millisecond response time, which ensures Uber's booking process is fast even for users who have a slow connection:Uber Lite keeps the core functionality of our rider app, and has many of its existing features like in-app support and the ability to share your trip with friends and family. But with a reimagined interface, it was designed to make booking rides easier and quicker in spotty connectivity and slower than average internet speeds, on basic Android phones, and for people with limited data plans through the following new features: Guided pickups: Uber Lite guides users through the request experience by detecting their current location, so minimal typing is required. If it can't detect your location because of GPS or network issues, it will surface popular pickup points nearby for you to choose from. Tap over type: Uber Lite makes picking your destination as easy as a tap of a button. The app caches the city's top places so that even when you are offline, no network is needed for them to surface. And the more you use Uber Lite, the smarter the app gets, learning where you go most often and surfacing those options for you to tap first, so you don't have to type your destination every time. Maps only when you want them: To keep the app light and fast, maps in Uber Lite are optional, but available with just a tap if you want them. And coming soon, a progress bar helps users follow the driver's progress should you opt to not load the map. Alas, iOS users will be left out in the cold. Uber Lite is currently available only for Android users. Are you and your beloved made for each other, or is your relationship doomed to failure? To find out, you could go to a relationship counselor or enroll in a seminar- or you could take the tests in this free software package. MB Free Love Test offers six compatibility tests: Astro, Kundali, Chinese, Moon Sign, Numbers (numerology), and the familiar Zodiac. A few of these tests ask for your time of birth, but seem to work without that information. Most of them assume that the pair are male/female combos, and the Kundali test appears to be geared for arranging child marriages-it requires "boy's details" and "girl's details." Good reporter that I am, I subjected my own marriage to this battery of tests. The Astro, Kundali, and Numbers results were all encouraging: We've got good compatibility, and our relationship is ideal. Unfortunately, however, we're a very bad match according to the Chinese, Moon Sign, and Zodiac tests. Well, as the bard says: The course of true love never did run smooth. Some of the analyses that this software provides could be good fodder for discussion, so it might be useful for dating or established couples. MysticBoard.com offers this software for free for 45 days, but asks that you register on its Web site after that time. There's no charge; instead you're expected to become active in MysticBoard's astrology-themed forums. -Kim Saccio-Kent
