Bootable usb windows xp setup free

Latest update on February 9, 2021 at 05:20 AM by Natalia Kudryavtseva . This FAQ will show you how to you to create a bootable USB drive to install Windows 7, Windows Vista, Windows 8 and Windows 10. This sort of drive is especially useful for mini laptops that don't come with a disc reader, and it enables you to finish the download process slightly more quickly. For this process, you will need your Windows disc ISO, a USB stick of about 4 GB, and a program called Windows DVD Tool, which you can download here. Create a Bootable USB Drive for Windows 10 Start by connecting the USB drive to your PC, and open Disk Management by right-clicking Start > Disk Management. Now, you will need to format the partition. To do this, right-click the USB drive partition, and select Format. Choose the FAT32 file system to be able to startup either BIOS-based or UEFI-based PCs. Finally, set the partition as active by right-clicking the USB drive partition and clicking Mark Partition as Active. N.B. If the Mark Partition as Active option isn't available, you can use diskpart to select the partition and mark it active manually. Now, use File Explorer to copy and paste the contents of the Windows product DVD onto the USB flash drive. Next, connect the USB flash drive to a new PC, turn on the device, and press the key that opens the boot-device selection menu for the computer (i.e. Esc/F10/F12 keys). Select the option that boots the PC from the USB flash drive, then, follow the instructions to install Windows. Note: Before booting your USB drive, don't forget to download the ISO file of Windows 10 on your pen drive. Windows 8 The following method applies to Windows 8. 1. Start up the software from the shortcut on your desktop, and click Browse. 2. In the window that opens, navigate to the folder where you have saved your ISO file, select it, then click Open > Next > USB device. 3. Select your USB drive from the drop-down menu, and click Next. The program will then get to work on formatting your USB drive. Note: read more about how to download and install Windows 8. Windows 7 and Vista The following method applies to both Windows 7 and Vista. Before beginning, plug in your USB drive and save its contents because the key will be formatted. Now, open the Command prompt, and type Run > CMD. Then, type the following commands: DISKPART > List disk > Select disk [your USB key disc number] > Clean > Create partition primary > Active > Format fs=fat32 quick > Assign (to assign a letter to your USB drive) > Exit (to exit diskpart) > Exit (to exit the Command prompt). Windows XP With CD If you have Windows XP on a CD, insert your Windows XP CD into the CD ROM drive and click Browse. Enter the destination path on the PC Select your CD ROM with the Windows XP in and click OK. Click Refresh and then go to the small arrow just to the left and select the USB key that you used to boot XP Select Fixed Click Go to begin the procedure Once the process is complete, close the program. Without CD If you don't have the Windows XP CD, you will need to download the Windows XP installer run the software and follow the installation wizard. At the very end of the installation, the software will launch. Installing Windows XP Connect the USB key to your computer and enter the BIOS Set your BIOS to boot the PC from the USB key Once done, save and restart your PC Here, you'll have two lines in the GRUB menu The first is to select the startup of the installation procedure The second line will be for the rest of the installation and the first boot of Windows XP Therefore boot on the USB key until Windows XP is fully installed Follow the installation instructions as for a normal installation Read Further How to download ISO image of Windows 10 How to fix disc boot failure Image: © IB Photography - Shutterstock.com Ever faced a virus attack on your PC? Have an old laptop that refuses to boot up one fine day, throwing up errors such as bootmgr missing or NTLDR missing? Your best option in both these cases may be to reinstall Windows on your computer. When you first use your computer, you're prompted to create a DVD backup of your Windows install, but keeping a DVD safely and not losing it can be a bother. Being able to reinstall Windows using a USB you just keep nearby can be a big help, and to do this all you need to do first is create a bootable Windows USB drive. This is also very helpful if you bought a compact laptop - many smaller new devices don't have a DVD drive. (Also see: How to Make a Bootable USB Disk for Windows 10) Remember you'll need a working Windows install (any version) to do this - if your computer won't boot, use a friend's to follow these steps. Here's everything you need to know about the process. How to Create a Bootable Windows 7 USB Drive The first thing you need is a Windows ISO or an image file. This is a virtual copy of a Windows installation DVD and you can source this legally from Microsoft without a product key. Here are the links for various edition of Windows 7. Windows 7 Ultimate (32 bit)/Windows 7 Ultimate (64 bit)/Windows 7 Professional (32-bit)/Windows 7 Professional (64-bit)/Windows 7 Home Premium (32-bit)/Windows 7 Home Premium (64-bit) You'll still need a valid product key when you reinstall Windows so make sure you keep that safely. Once you've downloaded the Windows 7 ISO file, follow these steps to burn it to a pen drive. Download the Windows USB/DVD tool from here and run it. Select the Language from the first drop-down menu. Then select the Edition of Windows you want to install. Your choices are: Windows 8.1, Windows 8.1 N, Windows 8.1 Pro, Windows 8.1 Pro N and Windows 8.1 Single Language. In the third drop-down menu next to Architecture choose whether you want a 32-bit or 64-bit version of the OS. If you need to see which version you're running right now, right click on My Computer and select Properties. There, you'll see the information you need under Windows Edition and System type respectively. Alternatively, check Microsoft's website for detailed instructions. Click Next. Plug in a USB drive to your computer. Make sure that it has at least 4GB space. If there's any important data on the drive, create a backup as this process will erase the pen drive completely. Now you'll be asked to choose where to save the ISO file. Choose USB flash drive. Click Next. You'll see a list of USB drives connected to your computer. Select your pen drive from the list and click Next. Now the Media Creation Tool will begin downloading the ISO straight to your pen drive. When the download completes, click Finish. How to Create a Bootable Windows XP USB Drive Go to the Windows XP SP3 ISO download page. Select the language from the drop-down menu and click the big red Download button. Download a free programme such as ISOtoUSB to burn the image to a pen drive. There are a lot of apps that let you do this and you can use any of these. We found ISOtoUSB easy to use and light, so we picked it over others. Install ISOtoUSB on your computer and open it. Click Browse and select the downloaded Windows XP ISO file. Plug in a pen drive with at least 1GB free space to your computer. All data on this pen drive will be erased so make sure you have a backup. In ISOtoUSB, select the pen drive from the drop-down menu. Click the checkbox next to Bootable Click Burn. When the process is complete, a bootable Windows XP USB drive will be ready. Booting and installing Windows from USB Drive Now you have a bootable pen drive ready, you can boot off this drive and install Windows, but the steps leading up to it may vary a little depending on the manufacturer of your computer. We've added a brief explanation below on how to do this. When you're booting up the computer, on the very first screen, you'll see a text which says something like "Press Del to Enter BIOS". Press whatever key is listed - this is usually Delete, or one of F1, F2, F8, or F12 - when the computer is booting, to enter the BIOS. There, you need to find a menu like Advanced BIOS settings, and select USB as the primary boot device. Now, you need to save and exit BIOS - the key to do so will be listed on-screen, but it is usually F10. Plug in the USB, and when you reboot, you'll start the install process for Windows on your computer. Follow on screen instructions to install Windows 8, Windows 7, or Windows XP. Did you manage to create a bootable Windows pen drive? Let us know via the comments. For more tutorials, head to our How To section.
